

Is there any similar project?

There are similar projects since student information systems are used every day worldwide. Of course, not all systems are identical, but they do have the same goal. Therefore, our system has some common elements with other systems, but we will focus on the parts that make our project stand out among the others.

Aim of this project is simple: to help students get all information about their school behaviour such as their attendance, grades, etc. It can be beneficial to professors, as well. This program will enable them option to check grades of students who attend their subject and in that way they can see if they need to use other approach in teaching or not.

STUDENT INFORMATION SYSTEM

Team Name:
MOCHA

Team Members:

Bakija Enver

Ćiber Faruk

Arnautović Adi

Pehlić Abdulmelik

Fehrić Armin

Required Facilities

All development will be done in Eclipse using Java.

SOFTWARE ENGINEERING

JAVA LANGUAGE

DATABASE SYSTEMS

User expectation:

Users can expect bugless and fully functional student information system application with simple and easy GUI, system that will encourage a strong and positive relationship between student and the university, alumni, professors and other constituencies and connect them quickly and efficiently.

Application that will integrate and support new learning and teaching opportunities and technologies for students and faculty.
